

Part 8 — Operate and Maintain

Level-1 cross-functional map · as specified · handover, turnover and the maintenance chain · gates 21, 30 and 34 · 8 September 2026

Magnus Workspace Platform - Process Maps and RACI

a defect brings the next visit forward

rejected: the visit goes back to completed

▲ **Live build deviates here today:** The platform has a complete and correct approval engine — R6 self-approval refusal, primary and alternate role checks — and twelve approval points across six modules take an approval reference as a plain string instead of calling it . gate 21 turnover has no code . gate 34 is consumed by the visit sign-off and the warranty claim it names has no record . the maintenance schedule never rolls forward

How to read A step by a person, with the record and its new state beneath.

☐ Automatic — the platform acts, nobody is Responsible.

G6 Director-COO Gate: number · primary (Accountable) · alternate (Consulted) · window.

HB6 Hard block: cannot proceed until the precondition exists. ▲ live deviation - - orange: return path

Key: CEO Chief Executive Officer · COO Chief Operating Officer · PM Project Manager · PIC Person In Charge · 2d/3d working-day window · [state] from the schema
