

Part 3 — Design and Permit

Level-1 cross-functional map · as specified · design package to issued for construction, and the permit chain · gate 18 · gate 20 · 8 September 2026

Δ Live build deviates here today: G18 design freeze is genuinely enforced — the package cannot reach issued for construction without it · G20 permit consultant is specified but no code raises it · a deliverable can go draft to approved with no named reviewer · the seal is recorded and never shown back

How to read

A step by a person, with the record and its new state beneath.

Automatic — the platform acts, nobody is Responsible.

Outside the company — client, supplier, authority.

G6 Director-COO

Gate: number · primary (Accountable) · alternate (Consulted) · window.

HB6

Hard block: cannot proceed until the precondition exists. Δ live deviation - - orange: return path
